

xyzmo brings signatures into the modern age. You no longer need to scan, fax or mail important documents that need to be signed. Just e-sign them with xyzmo. It could not be easier or more secure. Using **SIGNificant Enrollment/Verify for iPad** you can create a new signature profile and verify a signature against a pre-enrolled profile.

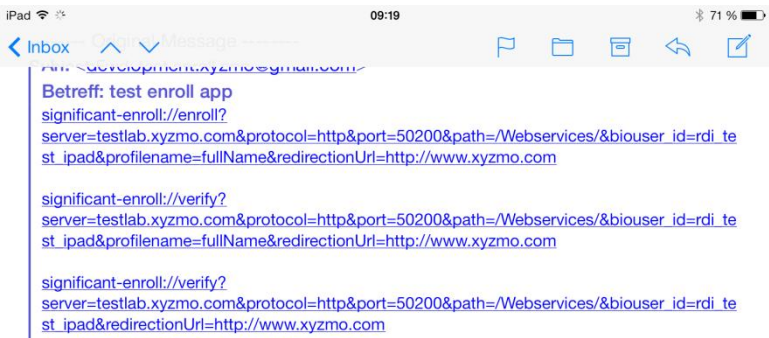

Internet access

Please note that an Internet connection is required to work with this app because the signature profiles are processed and stored online on our servers or your servers.

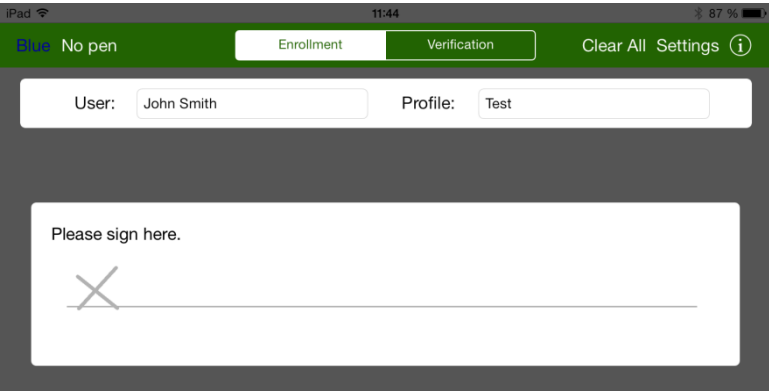

User Guide

Verify a signature against a profile via an email link

Tap on the “enrollment-link” in your email and it will be automatically opened with the SIGNificant Enrollment app.

The User ID and the Profile Name are predefined, so all you have to do is sign within the signature area and the signature will be automatically verified against the predefined profile.

Enroll and verify a signature profile directly in the app

First check that the “Enrollment” button is active in the app (highlighted in blue).

To enroll a new signature profile directly on your iPad manually, you have to enter the User ID and Profile Name. The User ID has to be unique, because it's the identifier. You can also enroll an additional profile for an already existing User ID.

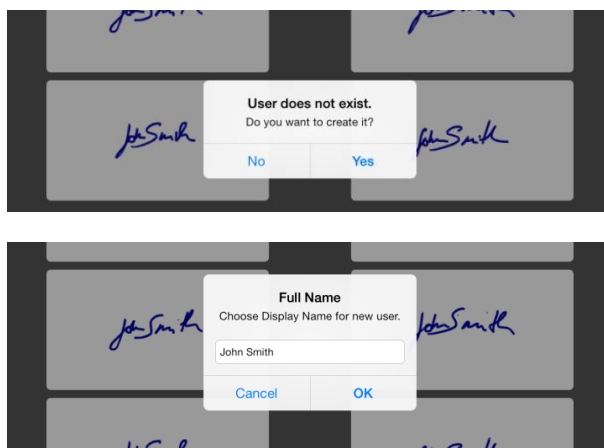

User: Profile:

Sign at least six times to provide enough signature samples.

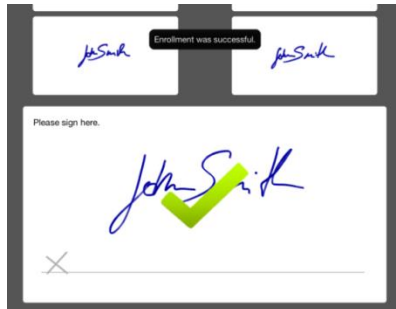

If the six signatures are too different from each other, you will be prompted to sign again. This process will be repeated until the profile and your signatures are sufficiently consistent.

If the User ID is not known to the server, you will be asked to create one and provide a full name for the user.

If the signature profile was successfully enrolled, you can use it to verify signatures.

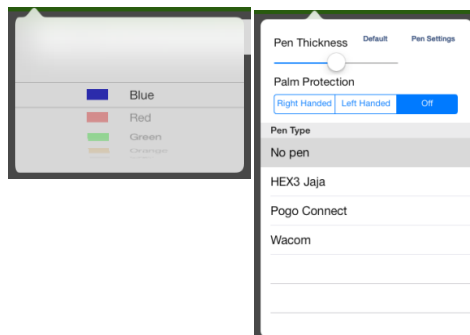

Switch to the “Verification” function.

Enter the “User Name” and the “Profile Name” that you want to verify. If you don’t fill out the “Profile Name”, the signature will be verified against all existing profiles (signature samples) of the user. (Note: You can create more than one profile per user – e.g. because the user has different signatures types – therefore it is necessary to insert a “Profile Name” if you want to compare the collected signature against a special profile.)

Settings

Signature color & pen settings

Note: Palm protection is only experimental and not yet fully developed.

About xyzmo SIGNificant

The SIGNificant platform includes the user interface and tools needed to define an optimal e-signature process and user experience. Whether for signature pads, interactive pen displays, mobile devices or web-based signing, the platform’s building blocks make it easy to pick and choose the best combination of e-sign solutions and signature-capturing devices for each situation.

xyzmo is a private company based in Ansfelden, Austria, with international offices in the United States and Romania. xyzmo and its predecessors have a combined history of more than 10 years of digital signature expertise. Our solutions have processed millions of electronic signatures to date around the globe.
